

Apollo Display Meter

We are proud to announce the arrival of our long-awaited light meter, Apollo! Apollo is a hand-held meter specifically designed to allow easy readings of UV light sensors, allowing an accurate measure of harmful ultraviolet rays.

Its intuitive and clear interface lets users take direct and live readings from attached light sensors, allowing quick assessments of risk to workers and/or the public.

Apollo can be used with any Skye UV sensors, including our specially designed sensor that monitors the rays harmful to skin health (Erythemal curve). This combination will allow those responsible for others' well-being to evaluate risk easily and clearly using world standard specifications (UV index).

In celebration of its launch, we have prepared special packages at a discounted price. These packages include Apollo, plus one, two or three Skye UV sensors (UV-A, UV-B, UV-I).

To order Apollo, or to request more information, you can simply e-mail us at skyemail@skyeinsturments.com or give us a call at +44(0)1597 824 811, and quote the package you are interested.

Apollo -	SKA 400
Apollo + UVA -	SKA400/UVA
Apollo + UVB -	SKA400/UVB
Apollo + UVI -	SKA400/UIVI
Apollo + All UV -	SKA400/UVA/UVB/UIVI

Any combination - SKA 400/[sensor name/sensormame]

- ✓ Light-weight, hand-held meter for light & UV.
- ✓ Instant reading: ready-configured for Skye Sensors.
- ✓ View & edit up to two units for measurements.
- ✓ Will work with both Skye sensors and some non-Skye sensors.
- ✓ Easy to use, simple interface.
- ✓ Store configurations for up to 6 different sensors.
- ✓ Auto-Ranging, auto adjusts significant figures.
- ✓ Customisable features.
