

SKYE INSTRUMENTS LIMITED DATAHOG2 AND WATER LEVEL SENSORS

Recommended Installation

Both the DataHog2 datalogger and the Water Level Junction Box housings are fully weatherproof. However, neither are submersible and it is recommended that these are installed off the ground, out of danger of flooding or waterlogged soil.

The logger and junction box housings can both be mounted to Skye's SKM 225WL pole mount, and attached to a pole or post driven into the ground. Skye's 1m pole ACC/11A-1 is ideal for this purpose.
