

# MiniMet Installation

## Why have an installation?

At Skye we realise that in this day and age, our customers' time is precious. Although the installation fee may seem like a big outlay initially, Skye has proved time and time again that a MiniMet which has been installed and commissioned by our trained personnel, is far more reliable and problem free than those installed by users themselves.

One incorrectly installed sensor, resulting in damage could cost you as much as you saved on the installation fee. By having Skye install your system, this means that you will not have to spend valuable time reading through installation manuals and not understanding something.

You will not have to find tools required in order to erect the system in the appropriate manner e.g. compasses to ensure correct orientation of wind sensors, spirit levels and hammers.

The system can be installed on a day that is suitable for you and you will receive one to one instruction and on-site training by our engineer.

You will have the peace of mind that the system has been installed correctly, in the right location and is left as a fully working system ready for you to use.

Taking the above into consideration, perhaps having Skye install your system, is not as costly as you may initially think?

If you have any questions about the installation process, or would just like some further information, please contact our sales team at [skyemail@skyeinstruments.com](mailto:skyemail@skyeinstruments.com).
