WIZZCOM 265 SOFTWARE

Live Data Display

The WizzCom software includes a quick and easy feature to view Live Data as shown in the screen shot below.

Data can be viewed in two ways:

- 1) for a quick check on current weather readings, the data can be updated every 5 seconds in the display below. The logger will not record data in this mode and so this should be used for a short time only.
- 2) alternatively the readings can be left on display permanently. In this mode the data is only updated at the logging interval (e.g. every 30 minutes).
